

Benedict College Columbia, South Carolina

This 16,000 square foot interior renovation project created a new Graduate Study building for Benedict College. The former medical office now provides classrooms, meeting spaces, and administrative offices to aid graduate students in their continued education. The program includes reception, classrooms, lecture room, student lounge, staff lounge, multipurpose room, offices, and support spaces. The project creates not only places for students to learn and meet with their professors, but places for students to study and interact with fellow classmates. This is especially apparent in the student lounge with school colors, interesting geometry, and storefront windows to welcome the students.
