

Greer-CPW Engineering Office

Greer, South Carolina

Greer Commission of Public Works found it necessary to expand their Operations Center to better monitor and serve customer needs. Design South began working with Greer CPW in 1996 to develop an appropriate design scheme that would include a complete emergency operations situation center and office space for utility department heads of their electric, gas, water, and sewer divisions.

The new addition includes several offices and adjacent workrooms as well as a much anticipated situation center designed with a large glazed curved window wall for monitoring of the client's service yard. In an effort to relate to the existing facility, the building's façade incorporates a decorative concrete masonry and brick veneer with a brick fascia/pilaster system mimicking the brickwork of the existing facility.
