Oskar Blues Brewery, located in Brevard, NC requested Design South Professionals assistance with implementing their pretreatment system. The pretreatment system was necessary to reduce organic and suspended solids loading to the Brevard Wastewater Treatment Plant, neutralize pH swings and meet temperature requirements. Initial services included evaluating a chemical process to reduce organics and assisting with negotiations for a Significant Industrial User discharge permit. Once limits were obtained from the City of Brevard, Oskar Blues commissioned Design South to proceed with design of the Phase 1 treatment system, consisting of equalization, pH Adjustment, screening and effluent flow measurement.
